

Severfield provides a cost-effective material discharge system, with our Siloflo product.

The Severfield Siloflo aeration discharge system offers a cost-effective and reliable method of discharging dry materials that fluidise with the injection of air.

Siloflo can be fitted in any number of configurations to suit your application and is widely used in the cement and similar industries.

Siloflo can provide a discharge solution with low operational and maintenance costs and as the aeration pads are externally mounted, they can easily be retrofitted to existing silos, hoppers and bins.

Features and benefits include:

Low running costs

Low maintenance

Easily retrofittable

- Can be changed from outside of the hopper, silo or bin
- Flush fitting on the internal surface
- Extensive range of assembly options

These systems replace the now obsolete Portasil Siloflo aeration system.

For more information on our aeration dischargers, please get in touch.

DO NOT SCALE - IF IN DOUBT ASK
