

BRS2 Distribution Centre Swindon

Location

Swindon

Main contractor

Buckingham Group
Contracting Ltd

Engineer

EIR Engineering

Architect

Ashton Smith

Tonnage

12,500

When is a warehouse, not just a warehouse? When it covers an impressive 600,000 square feet on the ground floor; that's the case with BRS2 in Swindon, a historic build for a major developer.

The third of its kind for us of this scale, this project allows us to tackle a challenge and leave a legacy in crucial infrastructure for the logistics and warehousing markets. This warehouse is positioned on a site covering a staggering 2.32 million square foot in Swindon. Above the enormous ground floor, the building has three mezzanine levels, each measuring more than 500,000 square feet.

Our team was brought in to deliver the design, connection design, fabrication and construction on site for the 12,500 tonnes of steelwork - as well as supplying and fixing the metal decking, handrails, stairs and precast concrete.

This is an exciting project that now plays a key role in job provision within the local area, employing around 2,000 people.
