

Regional Distribution Centre Stafford

Location

Stafford

Main contractor

McLaren Construction

Engineer

Fairhurst

Architect

SGP

Tonnage

2,500

Completion date

2021

The impressive distribution centre, located on Stafford North Business Park, is one of many 'mega sheds' that Severfield has been involved in, having worked on a huge range of distribution warehouse projects across the UK previously.

This project in particular measures approximately 300m long and 190m wide – consisting of 35 bays.

There's also an independent single storey recycling store, tote store buildings and several offices constructed alongside the warehouse - one of which is a three-storey external L-shaped main office which has a roof plant deck and screen.

Our main involvement on the project was the provision and installation of 2,500 tonnes of steelwork to site – along with additional products such as handrail systems and services such as full design and connection design - to name a few.
